- 3 (cancelled). 1
- 4 (cancelled). 1
- Methods for the production of mixed alcohols including the steps 11. (currently amended) 1
- of: 2
- using a sulfided, nanosized transition metal catalyst selected from Group VI metals; 3
- nanosizing the Group VI transition metal catalyst by selecting Group VI metals, and 4
- mixtures thereof, and then nanosizing said Group VI metals and mixtures thereof to a mean 5
- particle diameter [in the range of about 1 nm to] of about 100 nm; 6
- suspending the Group VI transition metal catalyst in a liquid to form a slurry; and 7
- contacting said slurry with gases including carbon monoxide and hydrogen at a temperature in 8
- the range of about 250°C to about 325°C and at a pressure in the range of about 500 psig to 9
- about 3000 psig, to thereby produce mixed alcohols. 10
 - 12. (original) The method of claim 11 wherein the nanosized Group VI transition metal catalyst 1
 - is sulfided prior to its use in producing mixed alcohols from gases including carbon monoxide 2
- and hydrogen. 3
- 13. (original) The method of claim 11 wherein the nanosized Group VI transition metal 1
- catalysts are selected from Cr, Mo and W, and mixtures thereof. 2 .
- 14. (original) The method of claim 12 wherein the nanosized Group VI transition metal 1
- catalysts, and mixtures thereof of claim 3 are produced including the step of sulfiding said 2
- nanosized Group VI transition metal catalysts, and mixtures thereof. 3
- 15. (original) The method of claim 14 wherein the nanosized Group VI transition metal 1
- catalysts, and mixtures thereof, are selected from Cr, Mo and W, and mixtures thereof. 2
- 16 (cancelled). 1
